

Tylö steam generator PRO.

A powerful steam generator for all needs.

Tylö's PRO steam generator is a reliable, maintenance-friendly steam generator that is everything you want in a public facility steam generator. The steam generator can be mounted on the wall and comes equipped with Tylö's latest h1 PRO control panel, which has a user-friendly interface and all the necessary features to control and service the steam generator. The easy-to-service steam generator also measures water quality and empties, flushes and refills the water tank through the built-in operational integrity without any noticeable effect on performance if the quality of the water deteriorates. For safety purposes, the steam generator has a safety valve and temperature limit control. IP rating: IP 21

Model	Output kW	Electricity	Size in mm (HxWxD)
9 PRO	9	230 V	880 x 590 x 455
12 PRO	12	400 V	880 x 590 x 455

TYLÖ[®]
for the senses

Solutions for a simpler day of work.

Maintenance-friendly design.

Behind the easy-to-remove service hatch is the actual steam generator. The water tank and tubular elements swing out for easy access, allowing plenty of room to work and an ergonomic position when servicing the generator.

Collapsible water tank.

The stainless steel water tank can be taken apart to service tubular elements and visually inspect the water tank. You can quickly and easily assess the status of the water tank and conveniently reach all parts for service purposes. The quick strap around the middle of the water tank prevents leakage.

Quick steam production.

The standby function lets TyLö's PRO steam generator give bathers an immediate experience while saving energy and helps to reduce the steam generator's output to stand-by levels during low periods. This feature produces steam quickly while saving energy and money.

First-class tubular elements.

We make the tubular elements, the steam generator's most vital component, in our factory in Halmstad, Sweden, guaranteeing a long-lasting, reliable product. Replacing tubular elements, should you ever need to, is easy due to the service-friendly design.

A match for calcium.

One frequent issue with steam generators is that they need to be descaled at regular intervals. Because of the large outlet ($\varnothing 1\frac{1}{4}$ "") on the steam generator's motor-driven drain valve, lime is flushed out with the rinse water instead of accumulating inside the water tank. In other words, there's no need to use descaling products in TyLö's PRO steam generator.

Special feature control panel.

TyLö's h1 PRO control panel with touch control lets you manually control the steam generator. For instance, you don't have to screw open the drain by hand, and you can carry out basic troubleshooting to monitor the status of the steam generator.
