

Tylö sauna stove TL black.

Tylö's sauna stoves TL in all black cover.

Tylö's existing series of wood fired sauna stoves TL are now being extended with an all black alternative. The black TL will be available in thirteen different models and five different outputs. With that Tylö now offers twenty one wood fired sauna stoves suitable for sauna rooms 3-37 cu.m.

Apart from the sauna stoves on the next page Tylö's black wood fired sauna stoves also come in models with double water tanks (TL-20VW), a single water tank model (TL-27V) and TSIS 27 and TSIS 37 which is fed from the adjacent room and creates a relaxing environment there too.

We also offer complete, high-quality chimney kits especially developed for use with Tylö wood-fired stoves. Chimney kits are based on an easy-to-assemble modular system. Read more at www.tylo.com.

The new series of black sauna stoves are replaces the KL sauna stoves.

Coanda air circulation system.

Between the outer mantle and the core are air channels that guide the air heated by the fire box through slits into the stone compartment. This ensures smooth and quick heating of the stones and, in turn, plenty of steam and effective air circulation in the sauna. As the fire dies down, the fire box walls cool and the air stops rising to the stone compartment due to the Coanda effect. This allows the stones to retain their heat.

Air guide.

All Tylö stove have an air guide plate in the back of the fire box, which reinforces the hottest, most stressed point and improves burning while saving on wood.

A well-considered construction.

Tylö wood-fired sauna stoves have deep and wide stone compartments to ensure that it is easy to throw water on the stones without letting it cool the heat source. In addition to smoother steam output, the large stone compartment also saves energy. Always use Tylö wood-fired sauna stones when using Tylö sauna stoves (Art. 9014 1007).
